

Project Title: Retail Sales Insights Dashboard

Tools Used: Power BI, Microsoft Excel, DAX

Project Objective:

To design an interactive and insightful dashboard that analyzes a retail company's sales data across multiple dimensions, helping stakeholders make data-driven decisions based on trends, regional performance, and product-level insights.

Data Source:

An Excel workbook containing three sheets:

- Orders: OrderID, OrderDate, CustomerID, ProductID, Sales, Quantity, Profit, City
- Products: ProductID, ProductName, Category
- Customers: CustomerID, Region

Dashboard Overview:

The project consists of three Power BI pages:

Page 1: Sales Overview Dashboard

- KPI Cards: Total Sales, Total Profit, Profit Margin, Total Quantity
- Line Chart: Monthly Sales Trend (Sales over time)
- Bar Chart: Top 5 Products by Sales
- Purpose: Provide a high-level overview of overall business performance

Page 2: Regional Sales Analysis Dashboard

- Map Visual: City-wise Sales Distribution
- Stacked Column Chart: Sales by Region and Category

- Slicer: Filter data by Region
- Purpose: Evaluate performance across different regions and product categories

Page 3: Product Performance Analysis Dashboard

- Table: Product Name, Category, Total Sales, Quantity, Profit Margin
- Bar Chart: Sales by Category
- Slicer: Filter by Category
- Purpose: Understand product-level performance and identify best/worst-performing categories

Key Features Implemented:

- Data modeling with proper relationships across tables
- DAX measures for custom KPIs
- Slicers for interactivity
- Clean, business-ready layout and visual design

Outcome & Impact:

The dashboards deliver valuable insights into sales performance trends, regional contributions, and product efficiency. These insights enable stakeholders to prioritize high-performing areas, optimize underperforming categories, and make strategic sales decisions.

Next Steps:

- Export dashboard to PDF or publish to Power BI Service
- Use screenshots and summary in resume or LinkedIn portfolio
- Build similar dashboards for other domains (e.g., healthcare, HR, finance)
